

Date: 27<sup>th</sup> May – 2<sup>nd</sup> JUNE 2019

By Rashid & Gerald

## Unloading trucks

During this week we continued to receive trucks from Kampala & Tororo warehouses that delivered maize grains, pulses and corn soy blend ++.

We also received 3 new mobile storage units. These we think will be used to replace the old rubb halls that had been in existence for long.

Figure 1 offloading a Q3 truck that delivered CSB++ for nutrition.

## Sample weighing bags

During loading and offloading we also continued to sample weight 10% of the consignment that has been dispatched or received. These are captured in the tally sheet for records purpose and for future references. Any deviations from the standard weights are immediately reported to WFP

## Cleaning activities

These include cleaning in and around the rub halls every day. We also allotted every Saturday of the week for the loaders to clear the vegetation around the fence. This help to clear hiding place for wrong doers and also control rodents. We developed a cleaning roster for the cleaners to guide them know what they should do each day.

## Restacking, re-bagging

During the week we also carried restacking, re-bagging and stitching the bags.

## Spraying, trapping rodents:

Every week we spray the stores to avoid infestation by weevils and other harmful insects to the food.

We carryout rat baiting as a routine activity in order to eliminates rats in the warehouse

We also properly arranged the pallets to allow easy cleaning of the stores

We also engaged the Cleaners to sort out maize that come damaged from Kampala.

## Fumigation & Spraying the warehouse during the week
